Heat-resistant Stainless Bearings

Heat-resistant Hybrid Bearings

Heat-resistant Stainless Bearings

Heat-resistant bearing, made of AISI 440C stainless steel with heat-resistant fluorine grease, can be supplied with short delivery in small lot like even one piece.

● Heat-resistant Stainless Bearings up to 482°F

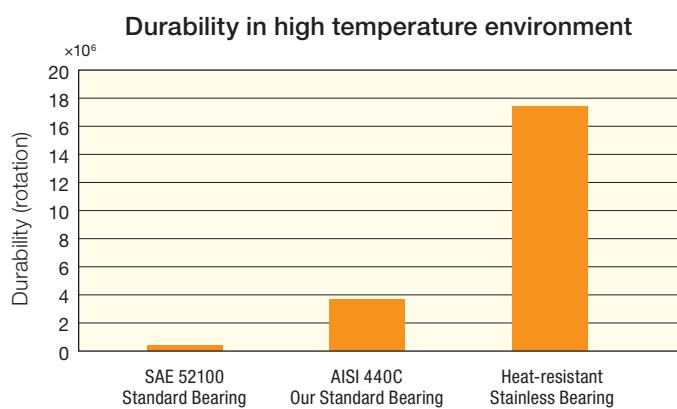

1. AISI 440C stainless steel has lower hardness decrease ratio and smaller dimension changes than SAE 52100 bearing steel in high temperature environment.
2. AISI 440C stainless steel is superior to SAE 52100 bearing steel in oxidation resistance in high temperature environment.
3. Filling heat-resistant fluorine grease enables lubrication in high temperature environment.

● Specifications

Inner and Outer Rings	AISI 440C
Balls	AISI 440C
Retainer	AISI 304
Shield	AISI 304
Seal	Fluorine rubber *1
Lubricant	Heat-resistant fluorine grease
Radial clearance	C4

*1 Sealed type available up to 392°F

● Performance

● Test Conditions

Bearing : 6004
Temperature : 482°F
Radial load : 1000N
Rotation speed : 2000min⁻¹

* The above performance values are our test results and are not guaranteed values.

● Application

Device around furnace, oven, heater, drying equipment, and other high temperature area.

SMT

Heat-resistant Hybrid Bearings

Longer lifetime, by incorporating ceramic ball,
than Heat-resistant Stainless Bearings

● Heat-resistant Hybrid Bearings up to 482°F

1. Hybrid type incorporating ceramic balls into outer and inner rings of AISI 440C stainless steel
2. Longer grease life, by lower heat generation with ceramic balls
3. Less running cost by longer lifetime
4. Material characteristics

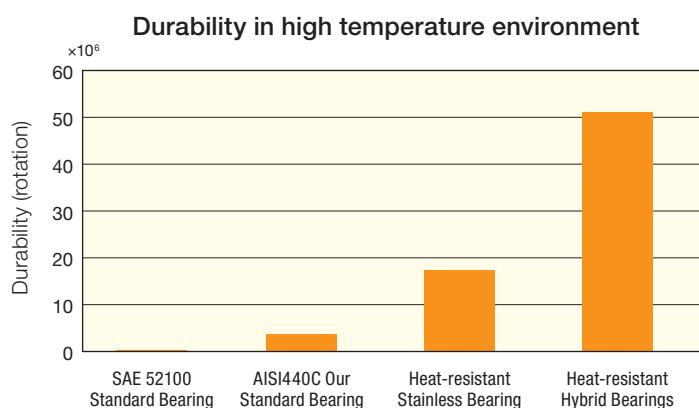

● Specifications

Inner and Outer Rings	AISI 440C
Balls	Silicon nitride (Si_3N_4)
Retainer	AISI 304
Shield	AISI 304
Seal	Fluorine rubber *1
Lubricant	Heat-resistant fluorine grease
Radial clearance	C4

*1 Sealed type available up to 392°F

Items	Unit	Silicon nitride Si_3N_4	Stainless steel AISI 440C	Bearing steel SAE 52100	Superiority of ceramic ball
Density	G/cm ³	3.2	7.8	7.8	Lowering centrifugal force of balls
Heat expansion coefficient	$\times 10^6/\text{°C}$	3.2	10.5	12.5	Small variation of internal clearance by temperature rise
Hardness	HV	1400	700	740	Excellent abrasion resistance
Young's modulus	GPa	320	200	210	Reducing friction by high rigidity
Heat resistance	°F	1472	752	356	Maintaining high load capacity in high temperature
Conductivity	—	No	Yes	Yes	Preventing electric corrosion

Examples:

- Heat-resistant stainless bearings
SS 6800 ZZ C4 PA

- Heat-resistant hybrid bearings
SS 6800 2RSV CB C4 PA

Under high temperature environment, radial internal clearance decreases due to difference of materials used for shaft, i.e. linear expansion coefficient, which may interfere with the rotation of the bearing. Please consider the thermal expansion sufficiently and select fitting and material of the shaft. Please contact us for further information.

* Performance values and expressions described in this catalog are guidelines for selection and are not guaranteed values. Please note that specifications may be changed without prior notice to improve product performance.
